Senior .NET Developer Test

Write a single page TODO application using

1. React as front end
2. API using .NET 5 or above to serve data to React.

The application will support the following functionalities

1. List my tasks
2. Add new task
3. Edit / Delete Tasks
4. A task will have a name, description, priority and status (Initial, In Progress and completed)
5. Task priority can be 1-5
6. A completed cannot be modified

HINT:

1. Use simple collection as in memory database

3. Make sure you have validation in place

4. Write some unit tests.

Zip your test project and send it to us
